

# Database Engineering & Query Optimization

1. Consider the following relational table 'Employees':

| EmpID | Name          | Department  | Salary |
|-------|---------------|-------------|--------|
| 101   | Alice Smith   | Engineering | 95,000 |
| 102   | Bob Jones     | Marketing   | 72,000 |
| 103   | Charlie Brown | Engineering | 88,000 |

Which SQL query computes the average salary for the Engineering department?

- (A) SELECT AVG(Salary) FROM Employees WHERE Department = 'Engineering';
- (B) SELECT SUM(Salary) / COUNT(\*) FROM Employees;
- (C) SELECT Salary FROM Employees GROUP BY Department;
- (D) SELECT MAX(Salary) - MIN(Salary) FROM Employees;

**=== ANSWER KEY ===**

1. A
